

PROFESSIONAL SUMMARY

Security researcher and full-stack developer with a hands-on approach to web application security. ISC2 Certified in Cybersecurity and CISCO Pentest Associate with practical experience across offensive security, tool development, and secure system architecture. Passionate about breaking things to understand them — then building better. Active CTF competitor and security community contributor.

CORE SKILLS

Offensive Security:	Web Pentesting · SQL Injection · XSS · CSRF · Auth Bypass · SSRF · IDOR
Security Tools:	Burp Suite · Nmap · Nikto · Gobuster · SQLMap · Wireshark · Metasploit
Automation & DevOps:	Python · Bash · Node.js · Docker · PM2 · Nginx · AWS · n8n
Development:	React/Next.js · TypeScript · FastAPI · PostgreSQL · Redis · REST APIs

CERTIFICATIONS & EDUCATION

ISC2 Certified in Cybersecurity (CC)

CISCO Pentest Associate

CompTIA Network+

B.Sc. / HND in Computer Science

PROFESSIONAL EXPERIENCE

Security Researcher & Developer

Freelance / SecLab Nigeria

- Conducted web application penetration tests against own projects and contributed findings to open programs.
- Built Hayaku Express — full-stack WhatsApp delivery platform handling real customers; implemented Twilio WhatsApp API, WebSocket rider tracking, and Paystack payment integration.
- Developed Hawkeye Intelligence — real-time OSINT platform for West African incident tracking; deployed with Docker on Oracle Cloud.
- Authored `malware_tool` — static malware analysis CLI with VT API integration, PE parsing, YARA rule scanning, and Flask UI; 47 GitHub stars.

IT Support & Network Administration

Various Organizations

- Managed Windows Server and Linux-based network infrastructure for small-to-medium organizations.
- Configured firewalls, VPNs, and VLANs; performed routine vulnerability assessments and patch management.
- Provided end-user support, printer/server setup, and Active Directory management.

CTF & COMPETITIVE SECURITY

- Active on HackTheBox, TryHackMe, PortSwigger Web Academy, and CTFlearn.

- HTB "Meow" (Beginner) — exploited Telnet with default credentials; Nmap + telnet enumeration.
- PortSwigger DOM XSS via postMessage — exploited Web Message injection in poorly isolated iframe.
- CTFlearn "BaseApp" Crypto — AES-CTR keystream recovery via known plaintext XOR attack.
- NepFest CTF 2024 "Login Bypass" — OR 1=1 injection, SQLMap escalation, admin panel access.

OPEN SOURCE PROJECTS

malware_tool Python · YARA · VirusTotal API · Flask
Static malware analysis CLI with PE parsing, YARA scanning, VT lookups. 47 & on GitHub.

Hawkeye Intelligence React · Node.js · PostgreSQL · Docker
Real-time OSINT platform tracking West African incidents, fleet movements, market data.

Hayaku Express Node.js · Twilio · WebSocket · Paystack
WhatsApp delivery bot serving real customers; automated order flow with live rider tracking.

SecLab Nigeria Next.js · TypeScript · Tailwind CSS
This site — interactive security demos, CTF writeups, and open tools for the community.

PUBLICATIONS & RESEARCH

- How I Found My First XSS — A Beginner's Journey" — Medium, May 2026
- Top 5 Recon Tools for Web Pentesting" — Medium, April 2026
- Why Every Developer Should Learn SQL Injection" — Medium, March 2026
- Security blog: mamuaminu.github.io/seclab-nigeria (live demos, writeups, tools)
- CVE monitoring pipeline: Tracking CVEs affecting West African banking, telecom, and government systems.
